Connect Your Google Account (OAuth)

Dashboards · https://www.serpsmoothie.com/support/dashboards/connect-your-google-account-oauth/

Connect once; we securely manage tokens and refresh as needed. You can start from onboarding or from Settings.

What you'll connect

- Google Ads
- Google Search Console

Steps

1. Go to Settings → Connections
2. Click Connect beside Google Ads or Google Search Console
3. Select the Google account and approve the requested scopes
4. You'll be redirected back to Connections with your connection active

Note: During account creation (Step 5 of onboarding), you can also use the Connect buttons there. If you connect from onboarding, you'll be returned to the onboarding Connections step.

Managing connections

- Multiple accounts are supported. Use "Add Another … Account" on the Connections page.
- You can disconnect and reconnect at any time from Settings → Connections.
- If tokens expire, you'll see a prompt to re-authenticate when fetching data.

Troubleshooting

- If your company uses multiple Google accounts, ensure you pick the one that has Ads/GSC access
- If approvals are blocked by policy, ask your admin to allow the scopes and try again
- See Troubleshoot Google Connections
